Missouri Experiment Station, Columbia, Mo. been considered prime silage and was greatly relished by the cows. The clover hay was of inferior quality, being mixed with several species of grasses and somewhat musty. It was not eaten with relish and comparatively little was consumed. These feeds had been used since the cow had been fresh--the amounts being gradually raised up to the beginning of the test. She had been fresh fifty-seven days when the test began. The daily program in feeding was as follows: Ensilage twice daily, at 6 a. m. and 3 p. m.; clover hay at 9 a. 11l. and 7 p. m.; grain ration before each milking, at 6 a. m., 12 m. and 6.45 p. m. In the table of foods consumed only the amounts of each food stuff actually eaten are included. In every THE GILROY HERD--ILLUSTRATION. Messrs. C....
