It will be seen that the gear C is provided with two pins, S and P, projecting laterally from its left hand face and the Fig. 2. gear A with sockets for these pins. When the shifting gears are in extreme position to the left these pins engage in the sockets and the two parts of the upper shaft are then locked together, causing the power to be transmitted directly. The countershaft then runs at the same speed as the engine, the same as for any other position of the shifting gears. When the shifting gears are moved to the right, to the position they are shown to occupy in the drawing, where gear C is...
